Recommended Citation

This Dataset is brought to you for free and open access by the Gordon Natural Area Baseline Plant Survey at Digital Commons @ West Chester University. It has been accepted for inclusion in Gordon Natural Area Baseline Plant Survey Documents by an authorized administrator of Digital Commons @ West Chester University. For more information, please contact wcressler@wcupa.edu.
Annotated Checklist of the Vascular Plant Species Observed at the Gordon Natural Area (West Chester University, PA) - Version XIII

Species Data
Species names follow the nomenclature in USDA PLANTS, with the exception of State-listed taxa (which follow the nomenclature of the Pennsylvania Natural Heritage Program). Species in red are non-native to the lower 48 States. Note: this likely will not be evident on copies printed in black and white. In this instance, refer to the 'Origin' field. Synonyms are those that appear in the various floristic studies at the GNA that were used in compiling the checklist.

Coefficient of Conservation
0 to 3: Plants with a high range of ecological tolerances/found in a variety of plant communities; 4 to 6: Plants with an intermediate range of ecological tolerances/associated with a specific plant community; 7 to 8: Plants with a poor range of ecological tolerances/associated with an advanced successional stage; 9 to 10: Plants with a high degree of fidelity to a narrow range of pristine habitats

Origin (in the lower 48 States)
N: Native; I: Introduced; N/I: Native in some parts of the Lower 48 States and Introduced in other

Key to Trait Symbols:
- Species is on the Pennsylvania DCNR list of invasive plants.
- Species is said to be resistant or tolerant to deer.
- Species with known allelopathic properties.
- Spring ephemeral species
- Is listed as an 'OBL' wetland plant in the Northeast Region of the U.S.
- Seeds/spores are hydrophilic (recalcitrant): i.e., intolerant of dry storage.
- Of specific value to native bees, bumblebees, honeybees, and/or predatory or parasitoid insects that prey upon pest insects.
- 'Wintergreen' species: Herbaceous species who's leaves emerge in late Fall and are present throughout the winter. Note: The largest portion of the data comes from a study of the 'wintergreen flora' of Ohio, hence, some species that are categorized as 'wintergreen' may possess a different phenology in Pennsylvania.
- The species is said to be associated with mycorrhizae.

Key to Growth Forms
F: Forb/Herb; F/SS: Forb/herb, Subshrub; F/V: Forb/herb, Vine; G: Graminoid; G/S: Graminoid/Shrub; SS: Subshrub; SS/F: Subshrub, Forb/herb; SS/S: Subshrub/Shrub; S: Shrub; S/T: Shrub, Tree; S/V: Shrub, Vine; T: Tree; V: Vine; V/F: Vine, Forb/herb; V/SS: Vine/Subshrub; V/S: Vine/Shrub

**Cupressaceae**

*Juniperus virginiana*
- Eastern Redcedar
- Coefficient of Conservation: 2
- Origin: N
- 'Traits':
- Growth Form: T
- First Noted: 1984; Last Noted: 2018

**Pinaceae**

*Pinus strobus*
- Eastern White Pine
- Coefficient of Conservation: 7
- Origin: N
- 'Traits':
- Growth Form: T
- First Noted: 1984; Last Noted: 2018

*Pinus sylvestris*
- Scots Pine
- Coefficient of Conservation: 0
- Origin: I
- 'Traits':
- Growth Form: Y/N
- Only Noted In 1978

**Taxaceae**

*Taxus cuspidata*
- Japanese Yew
- Coefficient of Conservation: 0
- Origin: I
- 'Traits':
- Growth Form: T
- First Noted: 1984; Last Noted: 2004

</tbody>
</table>
Summary Data:
The checklist contains 622 species in 340 Genera and 107 Families.

Of the 622 species, 433 are native to the Lower 48 States; 181 are introduced; 6 are species that are native in some states and introduced in others; and 2 are species who's 'origin' is not known (because they have only been identified to genus, and both native and introduced representatives of that genus are present in Pennsylvania).

The Checklist was compiled from the following sources, augmented by observations from GNA Staff fieldwork from 2016 onwards, and from fieldwork by Contract Botanists Jack Holt and Janet Ebert in 2017:

Allelopathy Data Compiled From:

USDA PLANTS. 2018. Query of the USDA PLANTS database for all species that had data in the 'Known Allelopath' field ('Has this plant species been shown to be allelopathic to at least one other species?'). https://plants.usda.gov/adv_search.html. Query conducted: 4/16/2018.
**Ant-disperal Data Compiled From:**

Ecological Applications 12(5): 1364-1377.

**Bee and Beneficial Insect Data Compiled From:**
LBJWC 2016a. Lady Bird Johnson Wildflower Center Special Collections. Data were compiled from the following five species lists: 'Special Value to Native Bees', 'Special Value to Bumble Bees', 'Special Value to Honey Bees', 'Provides Nesting Materials/Structure for Native Bees', and 'Supports Conservation Biological Control'. Data were provided to the LBJWC by the Pollinator Program at The Xerces Society for Invertebrate Conservation. https://www.wildflower.org/collections. Date accessed: 3/11/16.

**Coefficient of Conservation Data Compiled From:**

**Deer Resistance Data Compiled From:**
