World Resources Institute

WORLD RESOURCES INSTITUTE

ZERO-NET EMISSIONS BY 2050: CLIMATE REALITIES AND CHALLENGES

KARL HAUSKER, PH.D.
SENIOR FELLOW
KHAUSKER@WRI.ORG

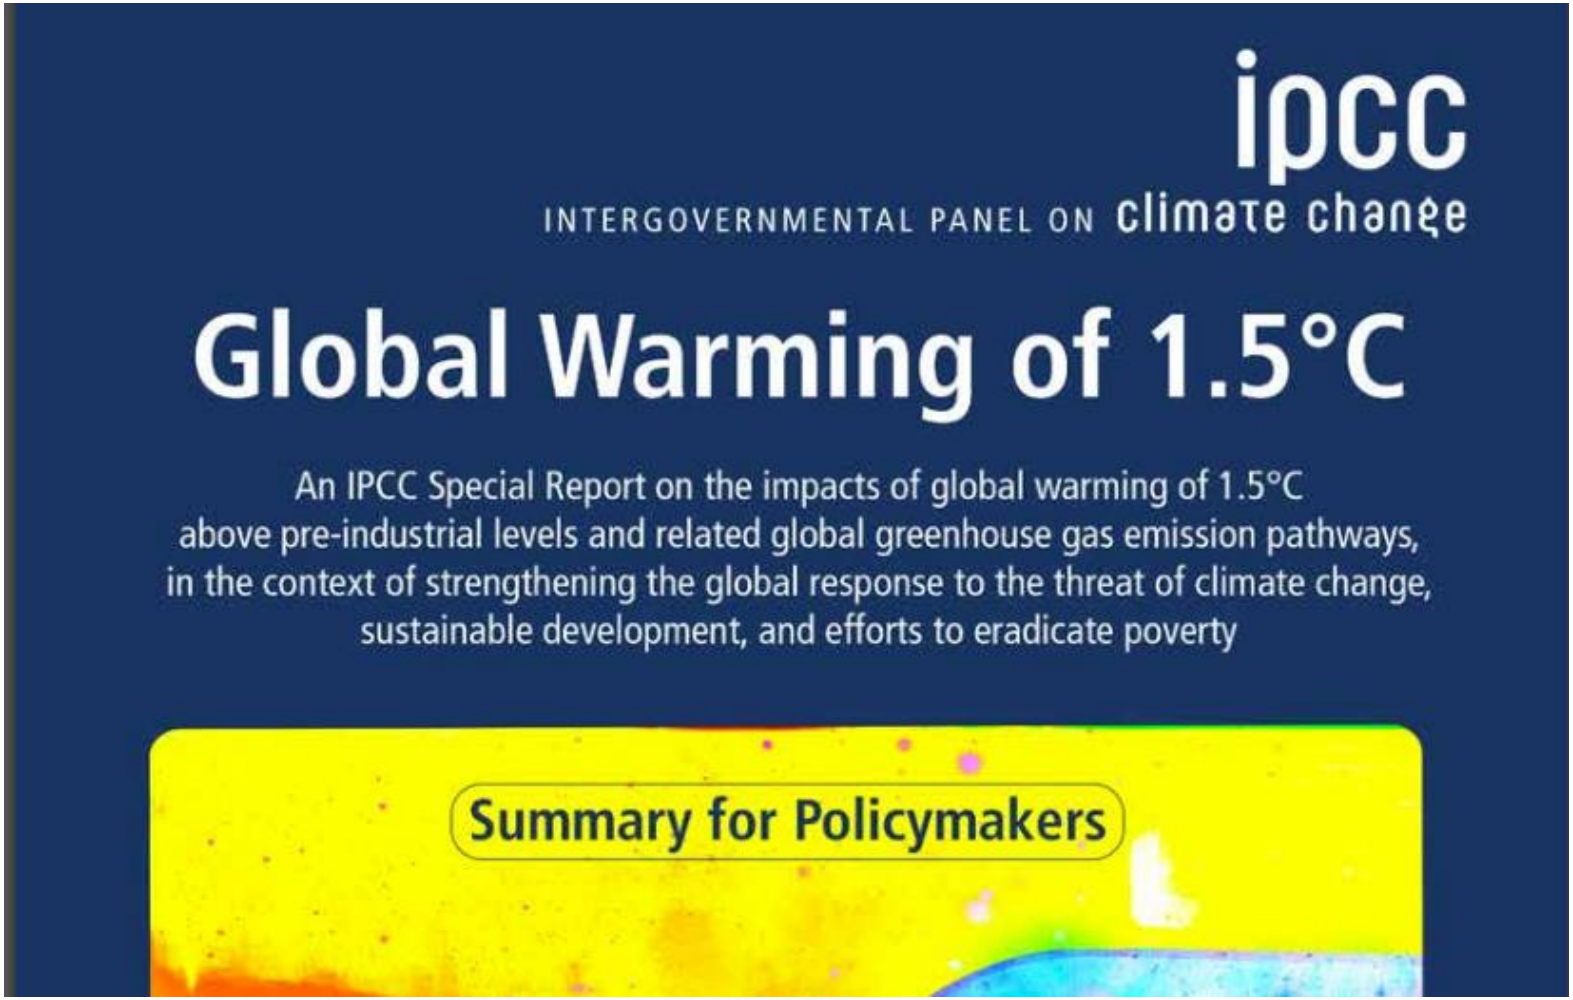
SEPTEMBER 2019

OUTLINE

- The mitigation challenge: the IPCC perspective
- Four strategies to reach zero net carbon
- The renewables revolution
  - how far can wind and solar take us?
- The need to “spread our chips”
  - roles for nuclear and CCS
- The imperative of carbon dioxide removal
- Key messages

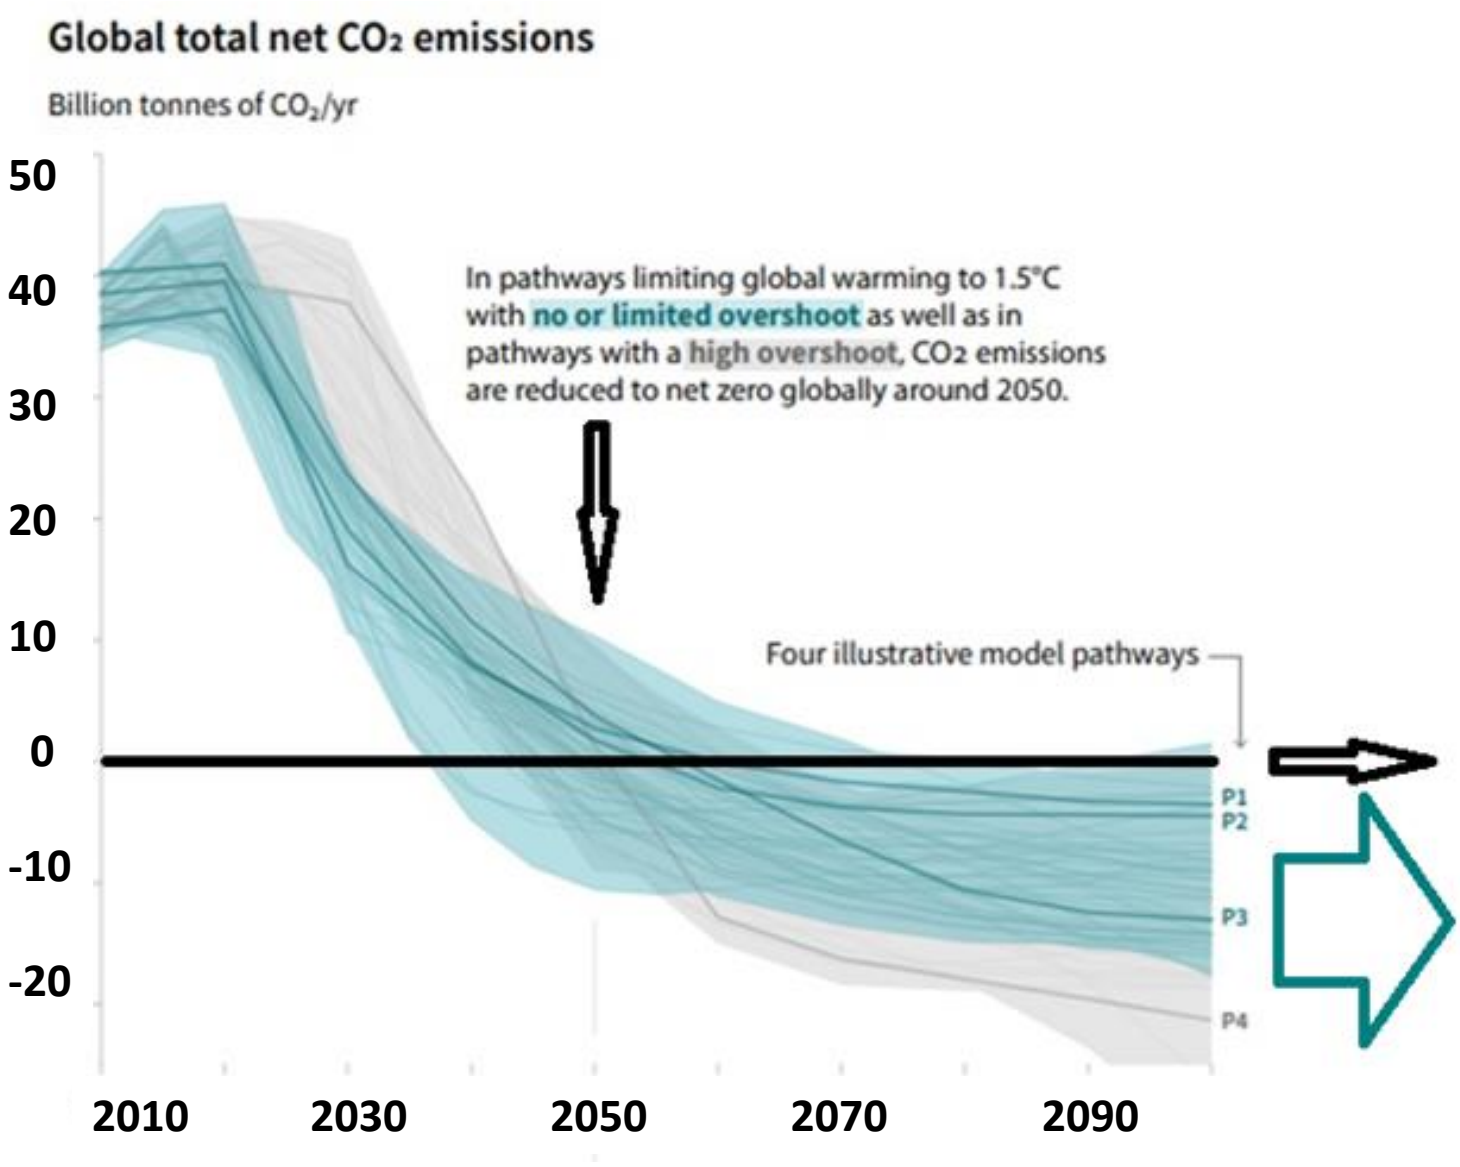
- *Speed limit, weblinks, Q&A*

IPCC REPORT RELEASED IN OCT. 2018 LAYS OUT GLOBAL PATHWAYS TO A SAFE CLIMATE



https://www.ipcc.ch/sr15/chapter/summary-for-policy-makers/

1.5ºC PATHWAYS REQUIRE NET-ZERO BY MID-CENTURY

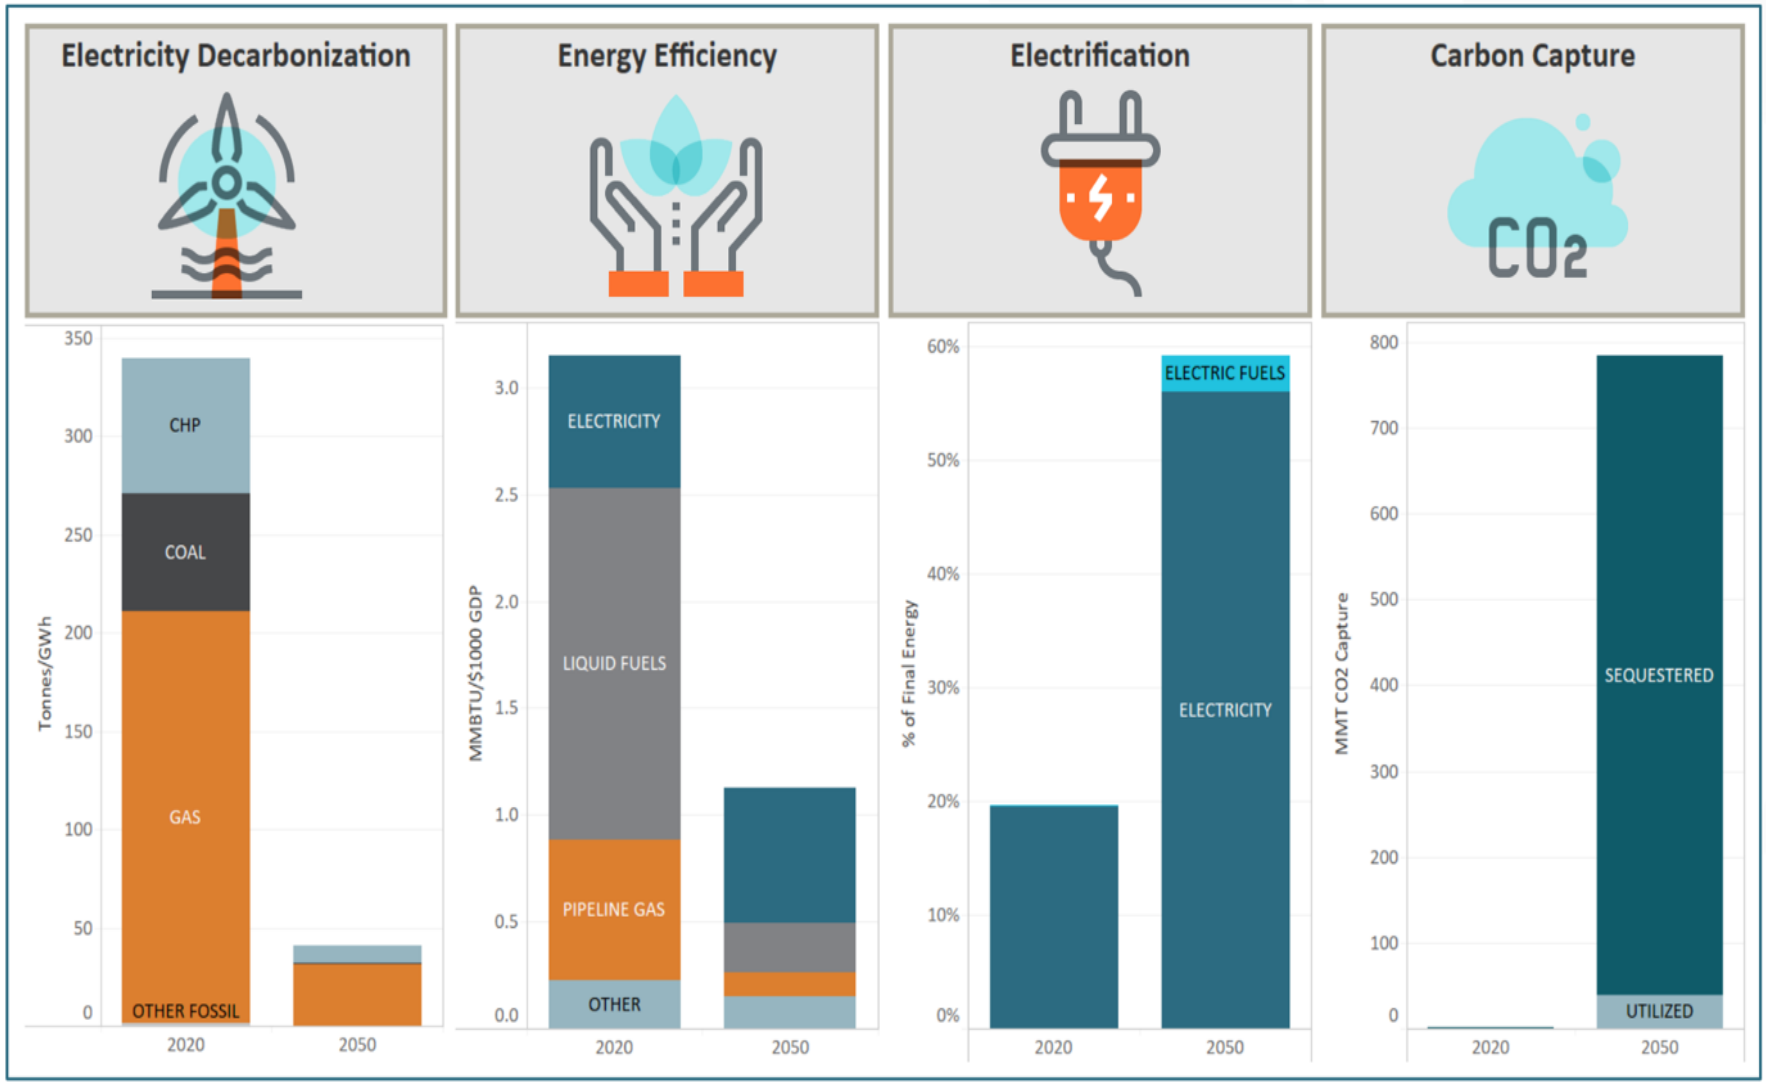


Net Zero Emissions

Illustrative pathways: P1, P2, P3, P4

https://www.ipcc.ch/sr15/chapter/summary-for-policy-makers/

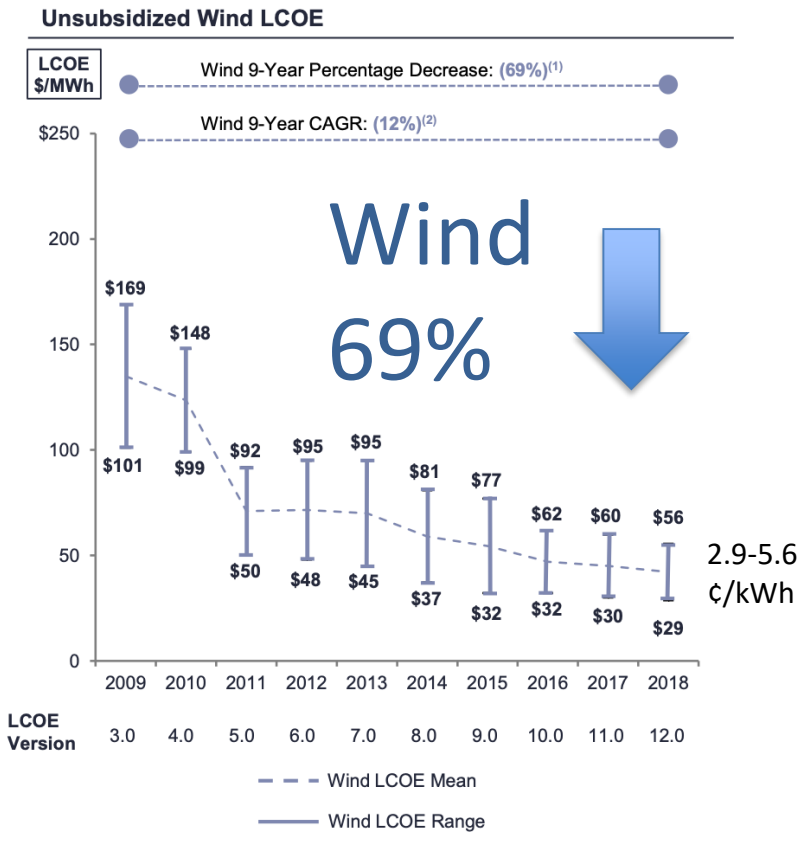
FOUR STRATEGIES TO TRANSFORM THE ENERGY SYSTEM TO ZERO-CARBON



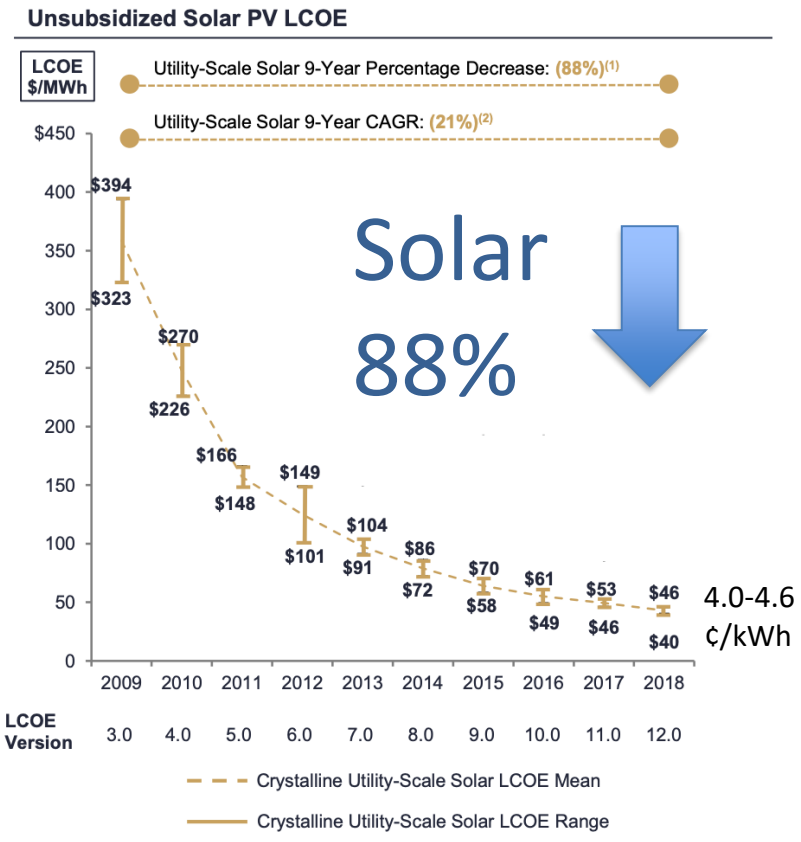
https://www.evolved.energy/single-post/2019/05/08/350-ppm-Pathways-for-the-United-States

THE RENEWABLES REVOLUTION

Dramatic cost decreases in wind and solar PV over the past 10 years
LCOE: Wind: 3 – 6 cents/kWh. Solar PV: 4 – 5 cents/kWh (Utility-Scale).



2.9-5.6 ¢/kWh



4.0-4.6 ¢/kWh

LAZARD

Source: Lazard estimates.
(1) Represents the average percentage decrease of the high end and low end of the LCOE range.
(2) Represents the average compounded annual rate of decline of the high end and low end of the LCOE range.

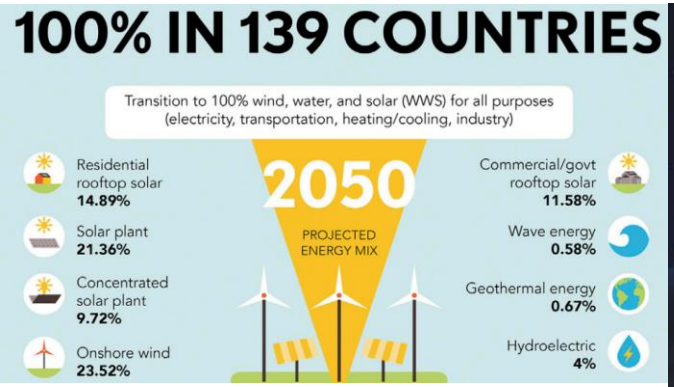
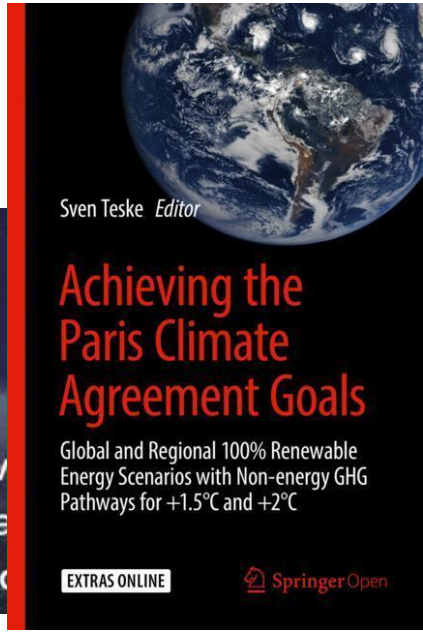
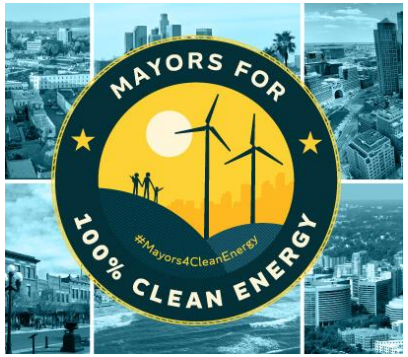
WORLD RESOURCES INSTITUTE

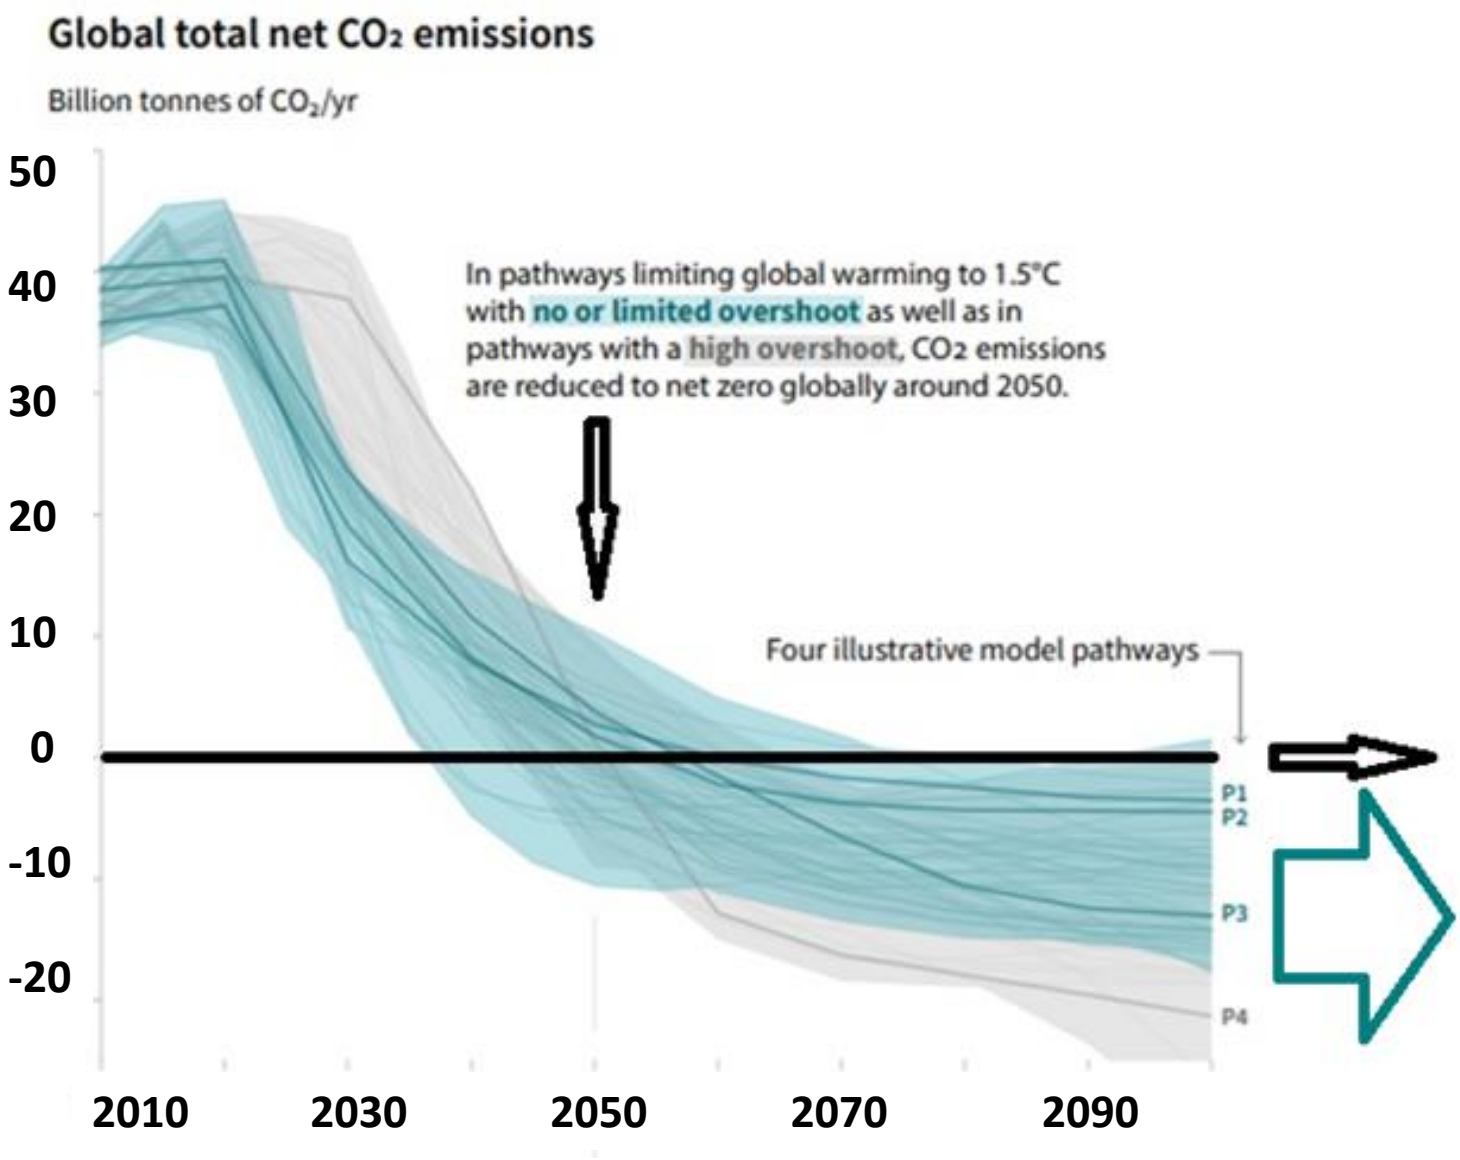
EMBRACING 100% RENEWABLES







1.5ºC PATHWAYS INDICATE RENEWABLE SHARE OF ELECTRICITY GENERATION OF 63-81 PERCENT



Net Zero Emissions

%Renewable of elec. gen.:

P1 – 77%

P2 – 81%

P3 – 63%

P4 – 70%

https://www.ipcc.ch/sr15/chapter/summary-for-policy-makers/

MODELING OF U.S. IN 2050: RENEWABLES BECOME LARGEST ELECTRICITY SOURCE (50-80%)

CAVEAT "BEYOND XX% RENEWABLES, SYSTEM COSTS INCREASE SHARPLY"

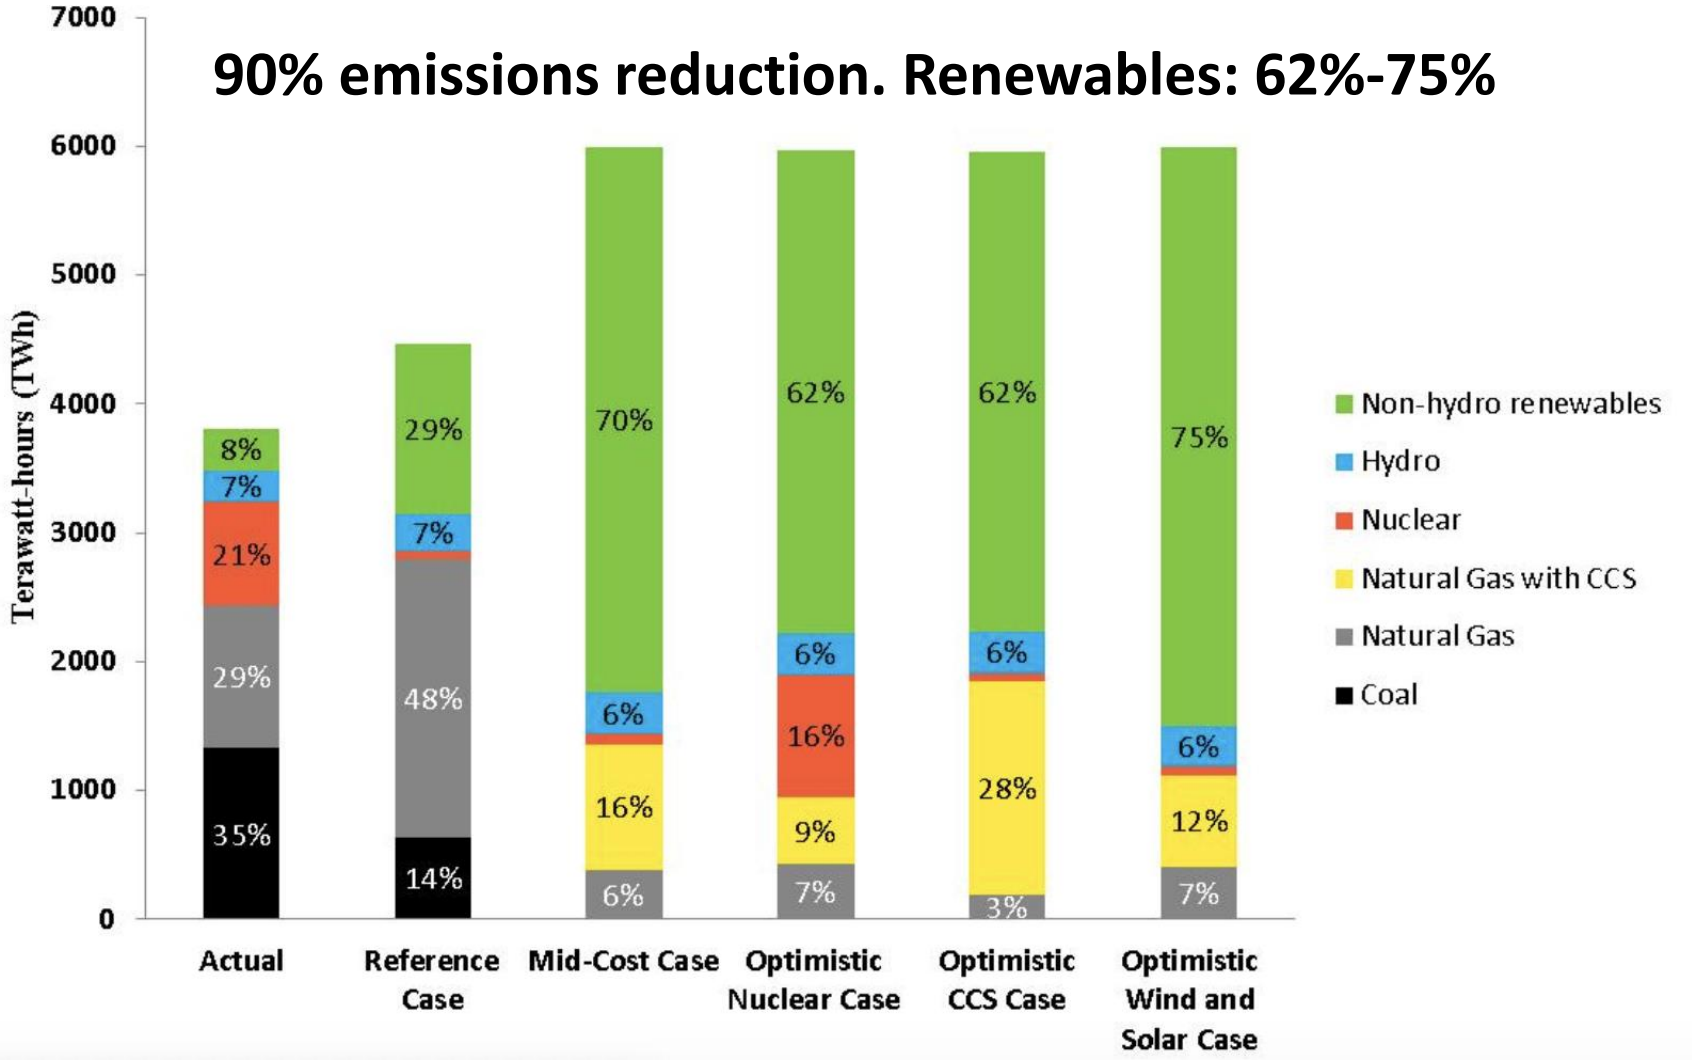
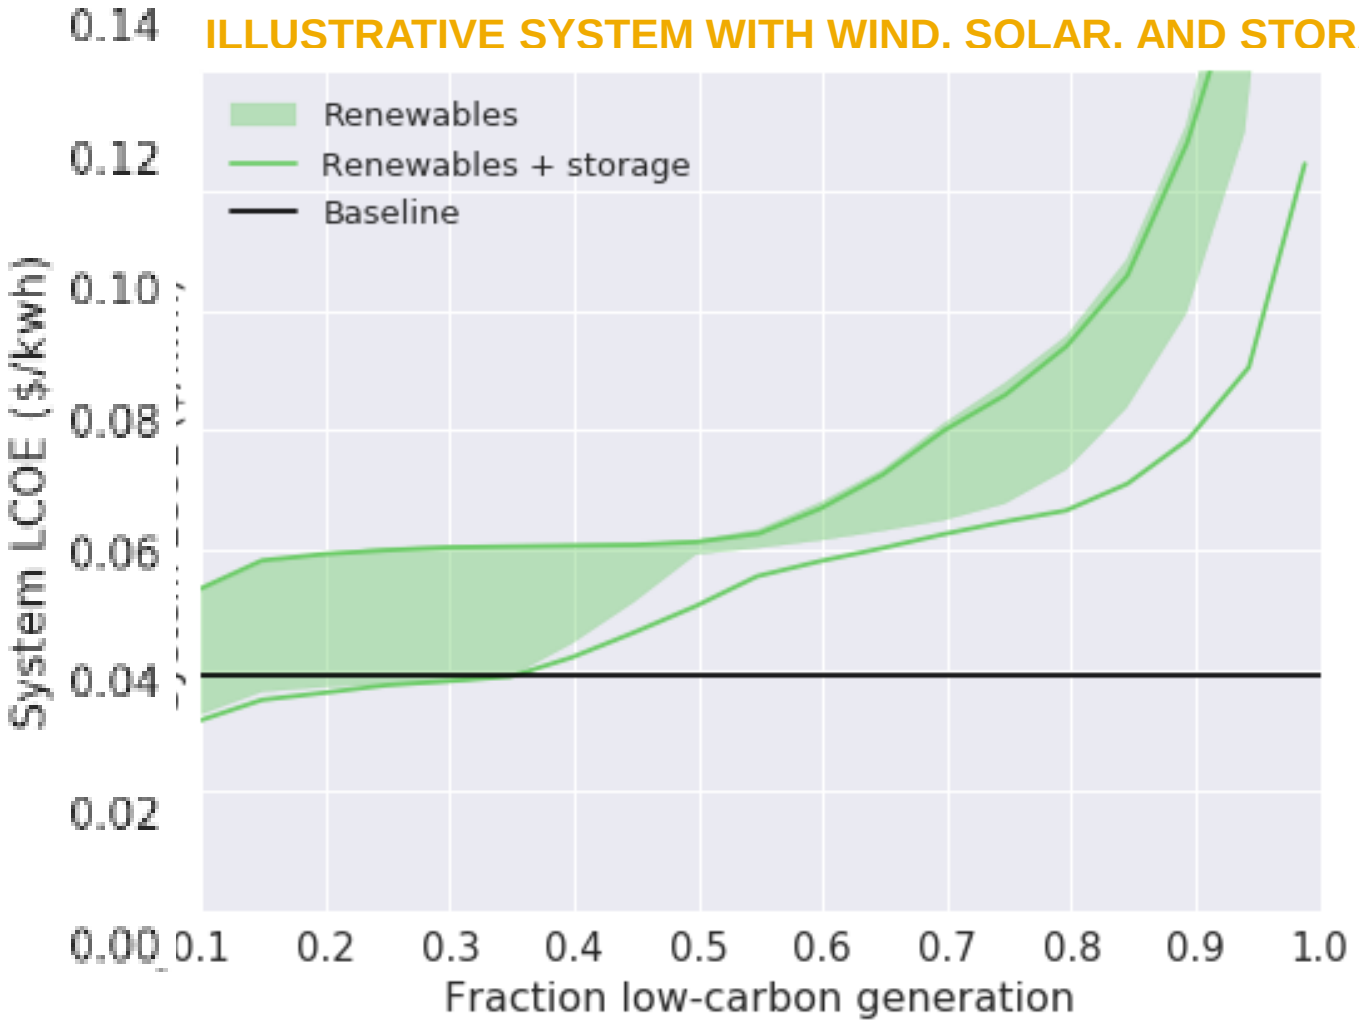
EXAMPLE OF A 2050 ELECTRICITY GENERATION MIX: FOUR SCENARIOS, UNION OF CONCERNED SCIENTISTS



Cleetus et al., US Power Sector in a Net Zero World, 2016

"SYSTEM LCOE" INCREASES SHARPLY WITH HIGH RENEWABLE PENETRATION



"Integration" costs drive up system LCOE:

- **Transmission**
- **Load shifting**
- **Storage**
  - **Daily**
  - **Seasonal**
  - **Weather flux**

"SPREAD YOUR CHIPS"

UCS REPORT CITES VALUE OF EXISTING NUCLEAR PLANTS

- **Without policies to replace retired nuclear power generation with low-carbon energy technologies, utilities could turn to natural gas and coal to fill the gap**
  - could result in a *4 to 6 percent* increase ir US power sector emissions.

Union of Concerned Scientists

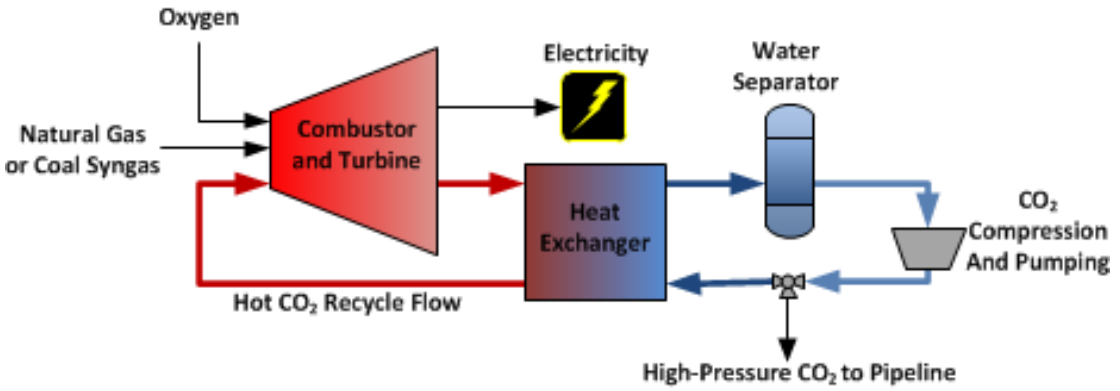
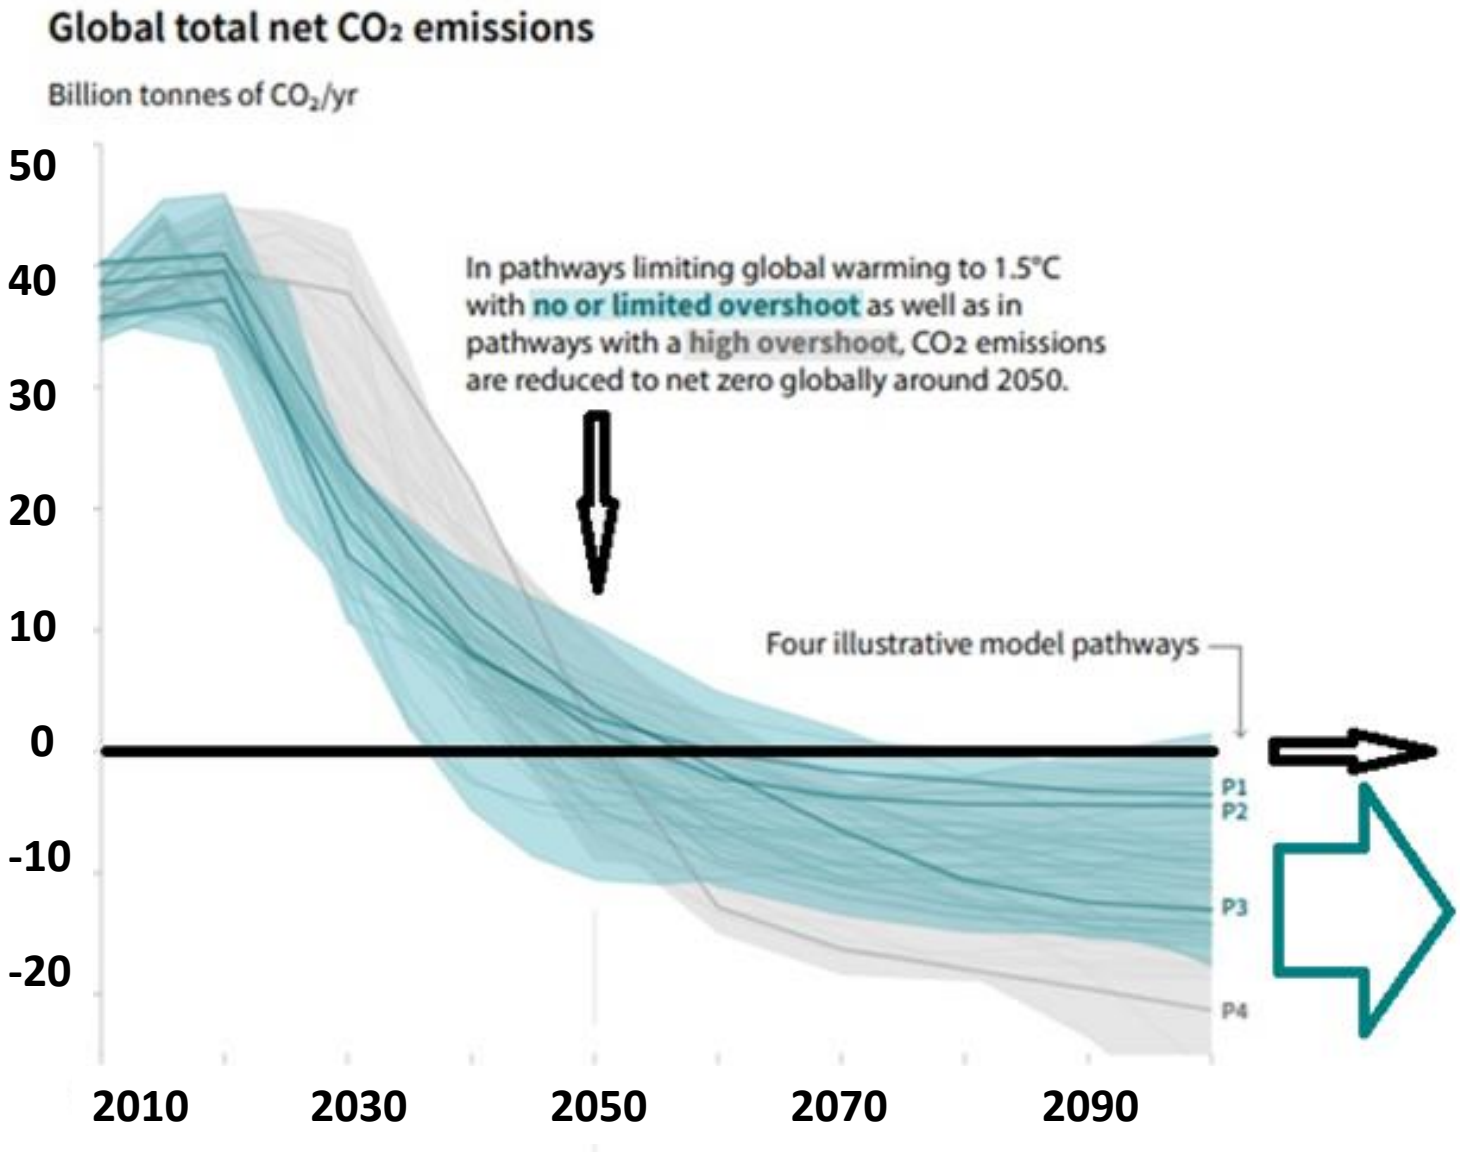
NETPOWER



NETPOWER

CARBON CAPTURE MUST BE FULLY COMMERCIALIZED

CRITICAL FOR INDUSTRY AND FOR CARBON DIOXIDE REMOVAL



Net Zero Emissions

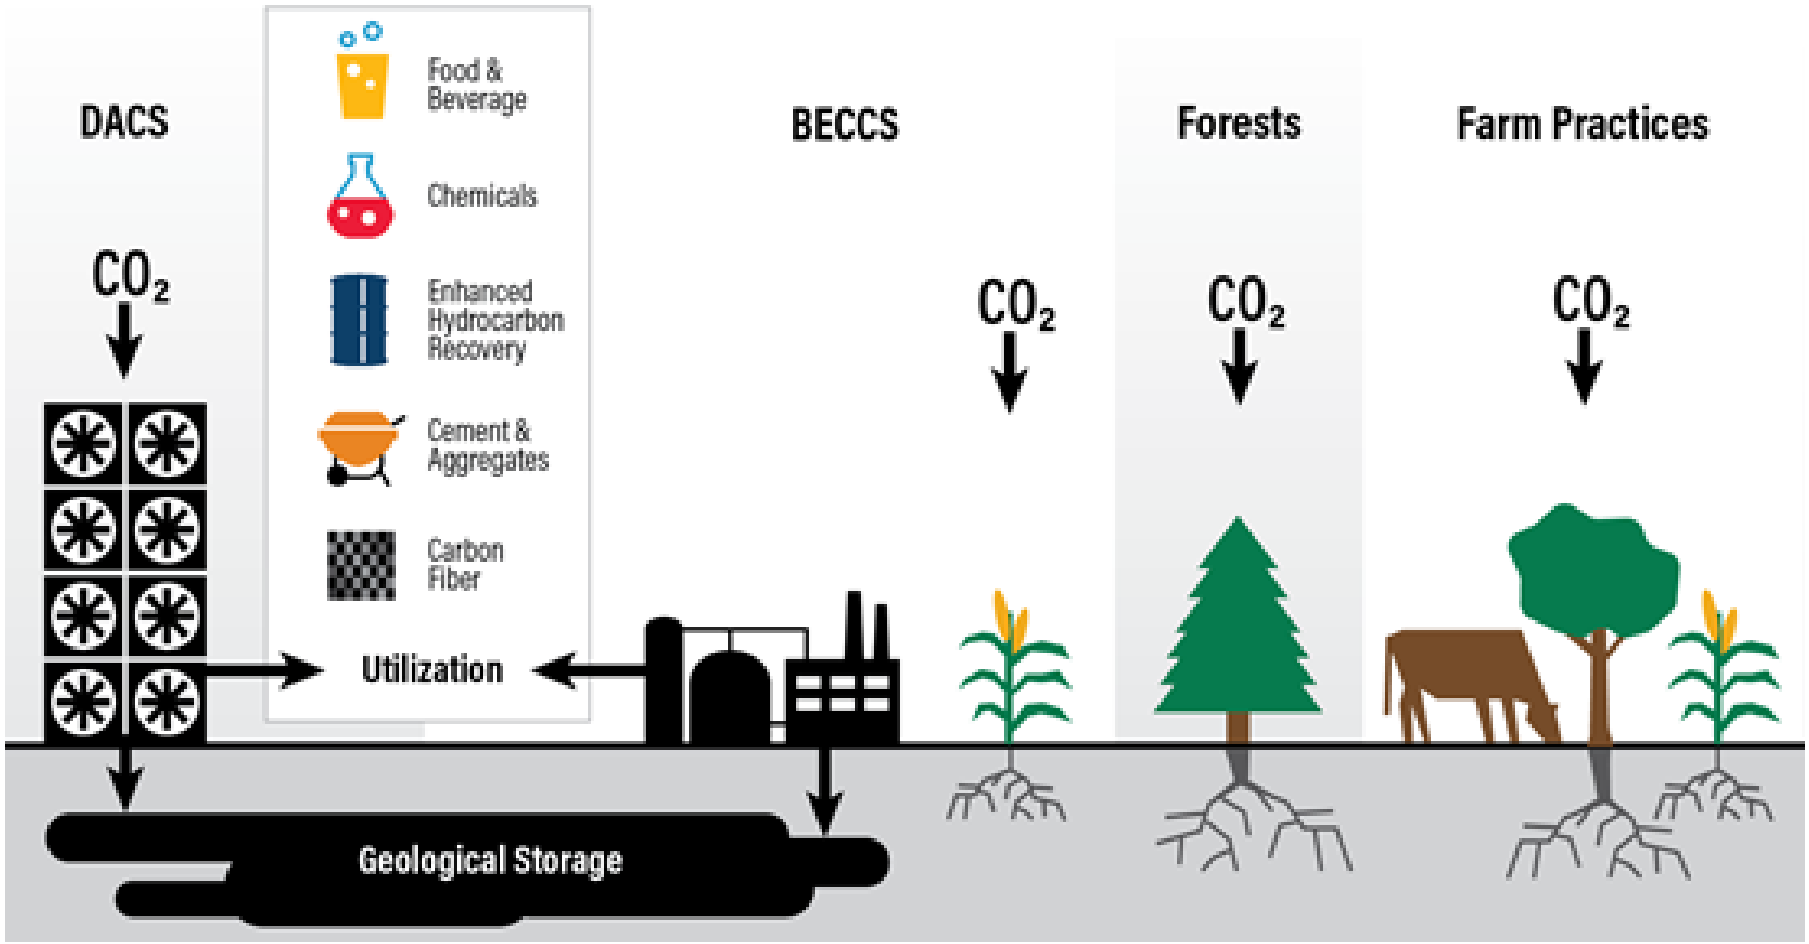
All pathways require

Carbon Dioxide Removal

https://www.ipcc.ch/sr15/chapter/summary-for-policy-makers/

WORLD RESOURCES INSTITUTE

CARBON DIOXIDE REMOVAL TECHNIOUES



Also at research stage: Enhanced weathering of rocks/minerals, and seawater capture

https://www.wri.org/publication-series/carbonshot-creating-options-carbon-removal-scale-united-states

EXAMPLES OF FEDERAL AND STATE GOALS: 100% RENEWABLE VS 100% CLEAN *(WITH RPS BOOST…)*

	100% Renewable	100% Clean (zero carbon)
Federal	• ***By 2035**: **Climate Solutions Act**, H.R. 330 (Lieu), 2019.* • ***By 2050: "100%" - Sanders***	• ***By 2030: Green New Deal Resolution**, (AOC-Markey)2019.* • ***By 2050: Clean Energy Standard Act** (Smith/Lujan), 2019.*
State	• **By 2045**: **Hawaii**, H.B. 623, 2015. • **By 2050**: **Puerto Rico**, P.S. 1121, 2019. • **By 2032: District of Columbia**, Clean Energy DC Omnibus Act, 2018 • ***By 2040**: **Colorado**, Governor's proposal for 100% renewable electricity.*	• **By 2045**: **California** S.B.100, 2018. • **By 2045**: **New Mexico** S.B. 489, 2019. • **By 2045: Washington** S.B. 5116, 2019 • **By 2050: Nevada** S.B. 358, 2019 • ***By 2040**: **New York**, Governor's Green New Deal proposal, 2019.* • ***By 2050: New Jersey**, Governor's E.O. #28 on Energy Master Plan* • ***By 2050:** Campaign commitments from governors in CT, IL, ME, MI, WI.*

Black = enacted
Blue = proposed

KEY MESSAGES

- 100% renewables vs. 100% clean energy
  - 100% RE for corporate/city/other buyers is OK – an incremental boost to demand for RE – but should evolve to 100% CE
  - 100% RE requirement for a state or country poses challenges in terms of performance, reliability, cost.
  - A broad portfolio of zero-carbon electricity options is valuable from cost and risk management perspectives (*"spread your chips"*).
  - CCS for carbon dioxide removal is critical to meeting 1.5 or 2 degree goals. CCS must be fully commercialized in the 2020s.
- Importance of RD&D programs with a broad portfolio.
- An expanded transmission system is critical in any scenario.
- Role of existing nuclear plants *(UCS report, Nov. 2018)*
- Global perspectives – food for thought…
  - Nuclear power
  - CCS
